

Data sheet

# Check valve

## Type NRVS

Check valve type NRVS has no damping feature and therefore can only be used for liquid line applications. NRVS is designed to be mounted directly to PM or solenoid valves EVRA/EVRAT.

**Features**

- Ensures correct direction of flow.
- Applicable to HCFC, HFC and R717 (Ammonia).
- Classification: DNV, CRN, BV, EAC etc.  
To get an updated list of certification on the products please contact your local Danfoss Sales Company.

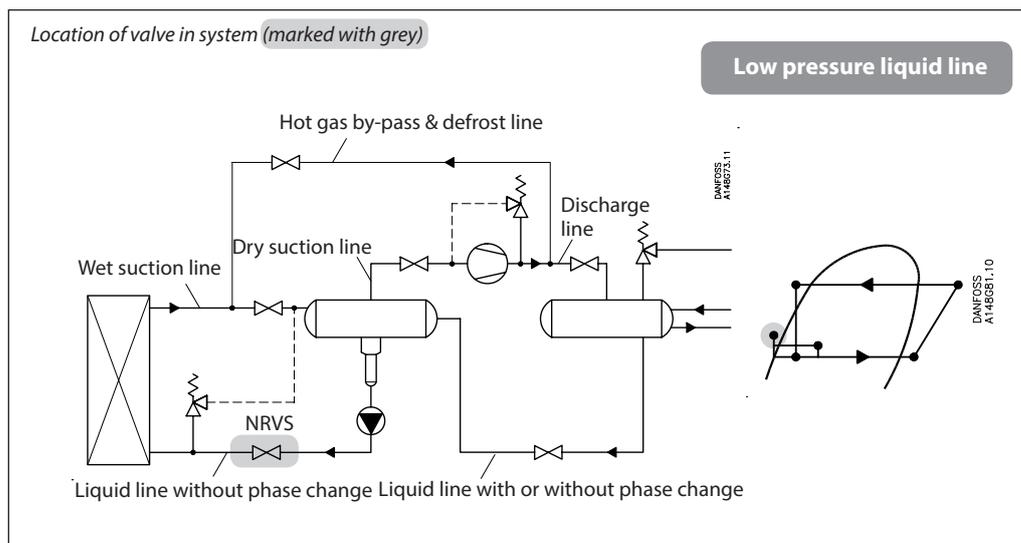

**Technical data**

- Temperature of medium:  
-50°C to +140°C
- Maximum working pressure:  
PS = 28 bar/406 psig

**Materials**

- Valve housing made of Stainless Steel.
- Gaskets are non-asbestos.

Capacities

| Valve combination         | EVRA/EVRAT 10 + NRVS 15 | EVRA/EVRAT 15 + NRVS 15 | EVRA/EVRAT 20 + NRVS 25 | EVRA + NRVS 25 |
|---------------------------|-------------------------|-------------------------|-------------------------|----------------|
| $k_v$ (m <sup>3</sup> /h) | 1.4                     | 2.2                     | 4.1                     | 7.0            |

| Evaporating temperature $T_e$ | Pressure $\Delta p$ (bar) | Capacities (kW) $Q_0$ at circulation rate 1 R717 |     |     |      |
|-------------------------------|---------------------------|--|-----|-----|------|
|                               |                           |  |     |     |      |
| -40°C                         | 0.15                      | 172  | 270 | 504 | 960  |
|                               | 0.25                      | 222  | 349 | 650 | 1110 |

|                               | 0.40                      | 264  | 414 | 772 | 1319 |
|                               | 0.50                      | 295  | 463 | 863 | 1475 |
| -10°C                         | 0.15                      | 156  | 245 | 456 | 780  |
|                               | 0.25                      | 201  | 316 | 589 | 1005 |
|                               | 0.30                      | 220  | 346 | 645 | 1102 |
|                               | 0.40                      | 254  | 399 | 745 | 1271 |
|                               | 0.50                      | 284  | 447 | 833 | 1422 |

Note: The capacities in the table must be divided by the actual circulation rate, or the evaporator capacities must be multiplied with the actual circulation rate.

**Solution**  
 $290 \times 4 = 1160$  kW  
 EVRAT 25 + NRVS 25:  $Q_0 = 1180$  kW, at  $\Delta p = 0.3$  bar is chosen.

Minimum opening differential pressure:

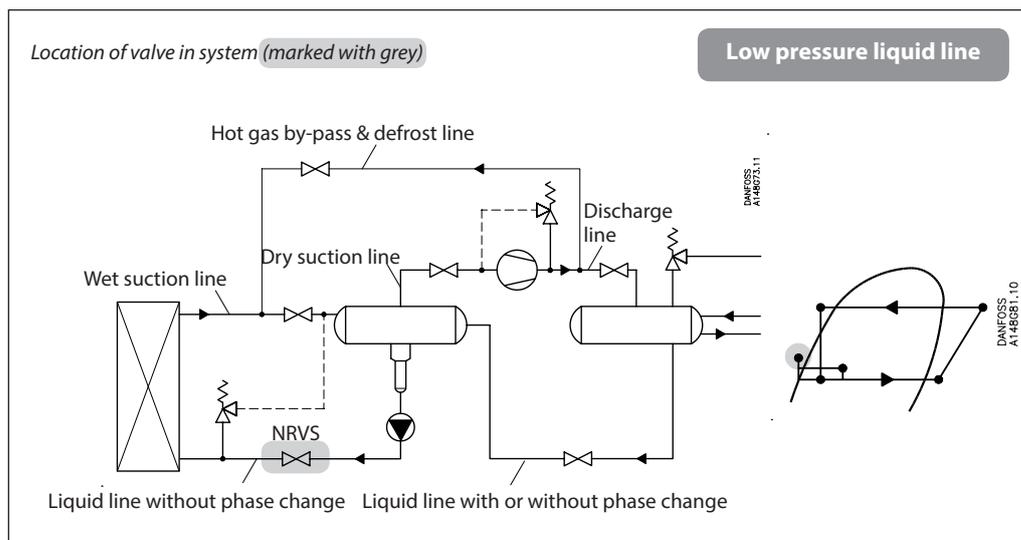

|                           |          |
|---------------------------|----------|
| EVRA/EVRAT 10 - 20 + NRVS | 0.07 bar |
| EVRA/EVRAT 25 + NRVS      | 0.11 bar |

Precise valve capacities can be calculated for various refrigerants by using the "DIRcalc™" (Danfoss Industrial Refrigeration calculation programme).

Example

An application has the following operating conditions:  
 Refrigerant: .....R717  
 Evaporating temperature: ..... -30°C  
 Evaporator capacity ( $Q_0$ ): ..... 290 kW  
 Circulation rate: ..... 4  
 $\Delta p \leq 0.3$  bar

Capacities

|                               | 0.25                      | 595  | 894  | 1114 |
|                               | 0.30                      | 653  | 979  | 1224 |
|                               | 0.40                      | 753  | 1130 | 1412 |
|                               | 0.50                      | 852  | 1264 | 1580 |
| -10°C                         | 0.15                      | -  | -    | -    |
|                               | 0.25                      | 575  | 862  | 1075 |
|                               | 0.30                      | 629  | 944  | 1180 |
|                               | 0.40                      | 727  | 1090 | 1362 |
|                               | 0.50                      | 812  | 1219 | 1523 |

Note: The capacities in the table must be divided by the actual circulation rate, or the evaporator capacities must be multiplied with the actual circulation rate.

Minimum opening differential pressure:  
PM + NRVS will be fully open at  $\Delta p = 0.25$  bar.

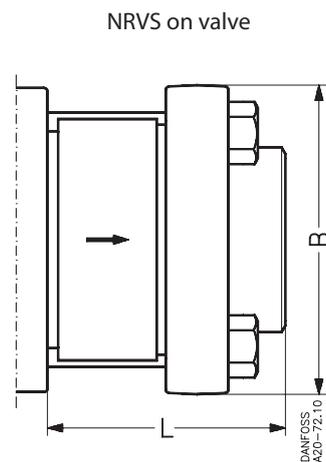

Precise valve capacities can be calculated for various refrigerants by using the "DIRcalc™" (Danfoss Industrial Refrigeration calculation programme).
